Preface	v
CHAPTER 1	
Stochastic Programming Models	
A. Ruszczyński and A. Shapiro	1
1. Introduction	1
2. Two-stage models	11
3. Multistage models	22
4. Robust and min–max approaches to stochastic optimization	48
5. Appendix	55
6. Bibliographic notes	62
References	63
CHAPTER 2	
Optimality and Duality in Stochastic Programming	
A. Ruszczyński and A. Shapiro	65
1. Expectation functions	65
2. Two-stage stochastic programming problems	72
3. Multistage models	93
4. Optimality conditions, basic case	97
5. Optimality conditions for multistage models	99
6. Duality, basic case	103
7. Duality for multistage stochastic programs	115
8. Min–max stochastic optimization	122
9. Appendix	126
10. Bibliographic notes	137
References	138
CHAPTER 3	
Decomposition Methods	
A. Ruszczyński	141
1. Introduction	141
2. The cutting plane method	144
3. Regularized decomposition	161
4. Trust region methods	175

5. Nested cutting plane methods for multistage problems	180
6. Introduction to dual methods	187
7. The dual cutting plane method	192
8. The augmented Lagrangian method	195
9. Progressive hedging	200
10. Bibliographic notes	207
References	209
CHAPTER 4	
Stochastic Integer Programming	
F.V. Louveaux and R. Schultz	213
1. Introduction	213
2. Structural properties	215
3. Algorithms	235
References	264
CHAPTER 5	
Probabilistic Programming	
A. Prékopa	267
1. Model constructions	267
2. Convexity theory	272
3. Numerical solution of probabilistic constrained stochastic programming problems	287
4. Dynamic type stochastic programming problems with probabilistic constraints	309
5. Bounding, approximation and simulation of probabilities	311
6. Duality and stability	334
7. Selected applications	338
References	345
CHAPTER 6	
Monte Carlo Sampling Methods	
A. Shapiro	353
1. Introduction	353
2. Statistical properties of SAA estimators	357
3. Exponential rates of convergence	371
4. Validation analysis	382
5. Variance reduction techniques	393
6. Multistage stochastic programming	399
7. Stochastic generalized equations	410
8. Appendix	416
9. Bibliographic notes	421
References	423

CHAPTER 7

Stochastic Optimization and Statistical Inference

G.Ch. Pflug	427
1. Uncertain and ambiguous optimization problems	427
2. The empirical problem	430
3. Properties of statistical estimates	433
4. Risk functionals and Lipschitz properties	445
5. Arithmetic means of of i.i.d. random variables	449
6. Entropic sizes of stochastic programs	458
7. Epiconvergence	461
8. Epipointwise convergence for stochastic programs	467
9. Asymptotic stochastic programs	470
10. Bibliographic remarks	479
References	480

CHAPTER 8

Stability of Stochastic Programming Problems

W. Römisich	483
1. Introduction	483
2. General stability results	488
3. Stability of two-stage and chance constrained programs	510
4. Approximations of stochastic programs	538
5. Bibliographical notes	547
Acknowledgements	548
References	549

CHAPTER 9

Stochastic Programming in Transportation and Logistics

W.B. Powell and H. Topaloglu	555
1. Introduction	555
2. Applications and issues	557
3. Modeling framework	564
4. A case study: freight car distribution	576
5. The two-stage resource allocation problem	579
6. Multistage resource allocation problems	609
7. Some experimental results	623
8. A list of extensions	627
9. Implementing stochastic programming models in the real world	629
10. Bibliographic notes	631
References	633

CHAPTER 10

Stochastic Programming Models in Energy

S.W. Wallace and S.-E. Fleten

637

1. Introduction

637

2. Electricity in regulated markets

639

3. Electricity in deregulated markets

653

4. Oil

667

5. Gas

670

6. Conclusion

672

Acknowledgements

673
